

## Mumboe Security

### Take Control of Your Business Agreements

#### SECURITY

### Secure, On-Demand Contract Management

As businesses continue to look for ways to make their processes faster, leaner and more competitive, companies of all sizes are turning to on-demand applications, also known as software as a service (SaaS) solutions, to solve their key business challenges. Like other industry leading SaaS companies, Mumboe uses the latest and most robust security solutions to protect your data and ensure the privacy of your business agreements.

**256-Bit Encryption:** Mumboe employs round-trip encryption, ensuring that all data is secure as it travels from your Web browser to our servers and back again. We utilize 256-bit Equifax SSL Certification and 1024-bit RSA public keys to ensure security of data during transmission.

**Password Protection:** Only users with a valid user name and password can access Mumboe. Mumboe Account Administrators control what these users can see and do in Mumboe, including which folders and documents they can access. Our robust data model prevents users from accessing information for which they do not have permissions.

**Web Site Security:** The Mumboe application and web site are protected by industry-leading security certifications including GeoTrust, McAfee and TRUSTe. GeoTrust® is the world's second largest digital certificate provider and verifies the identity of the Mumboe site. McAfee SECURE web sites have passed a set of daily security scans that helps address concerns such as identity theft, credit card fraud, spyware, spam, viruses and online scams. The TRUSTe seal marks companies that adhere to TRUSTe's strict privacy principles, and who strive to treat customer information with the utmost respect.

### Try Mumboe Free

**Easy to Try:** Sign up for a free, full version, no obligation account.

**Easy to Buy:** Upgrade risk-free with affordable, "pay-as-you-go" pricing.

**Easy to Use:** Start immediately. Nothing to download or install.

## SECURITY

**Defending Your Data:** Mumboe hosts its file stores on Amazon S3, a web hosting or “cloud computing” service that provides the same highly scalable, reliable, fast, inexpensive data storage infrastructure that Amazon uses to run its own global network of web sites. In addition to using S3 for reliability and scalability, Mumboe's own data center is defended with 24-hour physical security, picture identification systems, redundant air and electrical systems, and other backup devices designed to keep our application up and running—and secure.

**Locking Down The Application:** Mumboe takes several steps to prevent against unauthorized system intrusion:

- Database servers use non-routable IP addresses.
- All operating system software is maintained at the highest recommended patch levels. Unused ports are disabled and unused applications removed entirely.
- Network and internal security is enforced using a series of internal and external network security components including perimeter firewalls with Network Address Translation, IP masquerading, non-routable IP addresses, and other safeguards.

**Redundant Backup:** Mumboe also protects your agreements against loss with a redundant network configuration that ensures our networking components and web servers are operating at all times, and regular backups of the RAID file system that stores all customer data. Data is backed up to an independent set of disks and then again to tapes. In the event of a disaster, backup tapes are retrieved from their secure offsite storage location and brought to a designated disaster recovery facility.

**Recovering Your Data:** In addition to Mumboe's own backup processes, you can download your Mumboe data anytime. Contacts and Agreement details can be exported to a .CSV file and imported into a spreadsheet or into contact managers such as Microsoft Outlook, and you can download PDF files of agreements that have been uploaded into the system.

With Mumboe's industry leading security measures, you can rest assured your business data is protected.
